NAME
>   fixps – sanitize PostScript files

SYNOPSIS
>   **fixps** [*OPTIONS*] *FILE*

DESCRIPTION
>   Try to fix common PostScript problems that break postprocessing.

OPTIONS
>   **−h**, **−−help**
>>   display this help and exit
>
>   **−v**, **−−version**
>>   display version information and exit
>
>   **−q**, **−−quiet**
>>   don't print informational messages
>
>   **−o**, **−−output**=*FILE*
>>   save result in FILE. If FILE is '-', send to stdout
>
>   **−f**, **−−force**
>>   force full rewrite by ghostscript
>
>   **−n**, **−−no−fix**
>>   don't fix the FILE, but still honor '-o'
>
>   **−c**, **−−check**, **−−dry−run**
>>   don't perform any action

>   **Fixes:**
>>   - Remove junk before and after PostScript content - Use only Unix end of lines (\n) - Remove empty lines - Fix Apple prologue (fixmacps) - Fix FrameMaker prologue (fixfmps) - Fix Corel-Draw prologue (fixnt) - Fix Windows NT 3.5/4.0 prologue (fixnt) - Fix Windows 95 prologue - Ensure there is a '%%BeginSetup/%%EndSetup' section - Removes Canvas' extraneaous '%%EndDocument:' comments - Split too long lines

>   If the FILE seems really in a bad state, ghostscript may be used to perform a full rewrite. The output might then be significantly bigger, but much safer.
