

## **ReloadCMD.exe /restore**

/baseline //Restore to baseline snapshot.  
/current //Restore to current snapshot.  
/n "snapshot name" //Restore to a snapshot by name.  
/t "08/11/2004 18:00" //Restore system to the snapshot that is closest to 08/11/2005 18:00.  
/run "path to the executable" //Spawn a process after the restore.

## **ReloadCMD.exe /snapshot**

/n "snapshot name" //Take a new snapshot with given snapshot name.  
[/d "snapshot description"] //Take a new snapshot with given description, optional.  
/overwrite //Take a new snapshot with given snapshot name and  
overwrite the existing snapshot with the same name.

## **ReloadCMD.exe**

/resetbase //Reset PC back to the baseline snapshot.  
/updatebase //Update the current system as the new baseline.  
/delete /n "snapshot name" //Delete an unlocked snapshot by name.  
/delete /force /n "snapshot name" //Delete a snapshot by name regardless it's status  
(locked or unlocked)  
/lock /n "snapshot name" //Lock a snapshot by name.  
/lock /all //Lock all snapshots.  
/unlock /n "snapshot name" //Unlock a snapshot by name.  
/unlock /all //Unlock all snapshots.  
/exclude /f "path to file or folder" //Exclude the file or folder from rollback.  
/excludedel //Delete all files and folder exclusion list.  
/excludelist //Output the files and folder exclusion list.  
/snapshotlist //Output all the existing snapshot information.  
/hideicon //Hide Reload system tray icon.  
/showicon //Show Reload tray icon.  
/import "path to setup.cfg file" //Import program settings from setup.cfg.  
/uninstall current //Uninstall Reload to the current system.  
/uninstall baseline //Uninstall Reload to the baseline snapshot.  
/? or /help //Open Reload help file.

## **Access Control Optional parameters**

[/u "user"] //user name, only required if access control is enabled.  
[/p "password"] //user password, only required if access control is enabled.
